400 Million Feet

HISTORY

SERVING THE UNDERGROUND INDUSTRY WITH CONTINUED EXCELLENCE SINCE 1948

Duke's continues to offer the best product and service available for chemical root control, applied by our trained professionals who are experts in saving the lives of sewer pipes. More recently, Duke's has further developed and expanded its offering to include a full range of collection system Triage, Diagnose, Renewal and Monitoring to help our clients proactively control system inflow and infiltration.

TRIAGE
Effectively focus and prioritize key areas of your collection system to identify your most urgent issues by providing actionable information.

MONITOR
Deploy system-wide sensors to evaluate, optimize and conduct real-time predictive analysis to ensure your system's optimal performance for the future.

DIAGNOSE
By targeting problem areas and using state-of-the-art assessment technologies, we identify deficiencies and measure the defects in your sewer system.

RENEW
Develop custom rehabilitation solutions and project oversight to optimize your system's operational effectiveness and restore your assets.
