## C Series Compact Excavator KLAC Coupler Operation

KLAC (*pronounced Clack*) couplers provide a mechanical coupler for buckets or other attachments without the digging power loss of a pin grabber coupler.

The KLAC coupler allows operators to release the bucket using the KLAC tool, and maneuver the arm to remove the attachment.

Once the operator has lined up the pins to put the attachment on, curling the bucket will engage the Klac system, snapping into place, so the operator does not have to leave the seat a second time to secure the bucket or attachment.

KLAC couplers only accept KLAC buckets

Unlock Tool installed

Pull downward on tool to unlock

Bucket unlocked

KLAC Unlock Tool

The coupler will stay in the unlocked position until a new bucket is attached and it will automatically lock.

After unlocking the KLAC coupler, remove the tool and store it.

*Pin grabber buckets cannot attach to a KLAC coupler. A KLAC base plate can be purchased so that non KLAC buckets can be attached using the KLAC coupler.*

## C Series Compact Excavator Mechanical Pin Grabber Coupler

The optional Mechanical Pin Grabber coupler allows the Quick disconnect / connect of pin-on buckets.

The coupler comes with a tool (blue arrow) to open and close the coupler.

To disconnect the bucket - roll the bucket out to the position shown to first remove the lock pin (red end).

Insert the tool in the coupler as shown and raise the tool toward the arm until the pin can be reinserted through the holes (red Arrow) holding the coupler in the unlocked position.

Once released, the operator will move the arm to maneuver the coupler out of the bucket or attachment.

Reverse the process to lock the coupler on the next bucket.

*All buckets used must have a set of pins installed in the bucket. A dead pin kit for buckets is available through NH parts.*

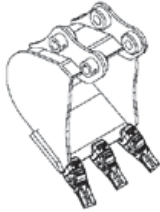

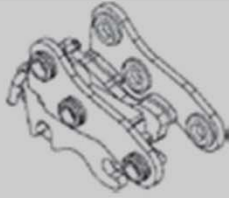

## C Series Compact Excavator Hydraulic Pin Grabber Coupler

The hydraulic pin grabber allows the operator to use the hydraulic coupler switch in the cab to attach and un-attach pin grabber buckets and attachments without leaving the seat.

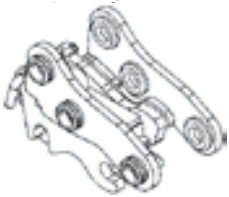

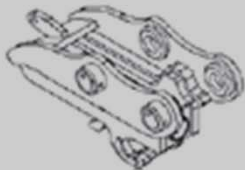

This option allows an operator to easily and quickly change attachments, and get back to work.

## OPERATOR CONVENIENCE VS. BREAKOUT LOSS

	Least ←	Breakout Loss	→ Greatest
Least ↑	 Direct Pin-On		
Operator Convenience		 Klac Coupler	 Mechanical Pin Grabber
↓ Greatest			 Hydraulic Pin Grabber

## Coupler Style Guide

		Use	Notes
Direct Pin-On		For use where bucket changes are infrequent, or where cost of labor is less impactful.	Direct Fit buckets provide the best breakout force.
Klac Coupler		For use where operator convenience and limited breakout losses are key factors.	The low profile of the Klac style coupler is designed to mitigate the loss of breakout force.
Mechanical Pin Grabber		For use where bucket (accessory) changes are frequent.	Breakout force is reduced due to increased length between hydraulic torque input and digging implement.
Hydraulic Pin Grabber		For use where bucket (accessory) changes are frequent and operator convenience is key factor.	Breakout force is reduced due to increased length between hydraulic torque input and digging implement.

Average Lead-Times		
Unit/Attachment	Order to Port	Port to Dealer
Italy	50-70 days	15-20 days
Korea	50-70 days	15-20 days
Buckets, Couplers & Thumbs	30 days (average) / 60 day (promise)	

\*Subject to change without notice. Based on availability of parts.

- Units shipping from Korea will take longer in-transit to East Coast ports. Units shipping from Italy will take longer in-transit to West Coast ports.

Quick Ship Rules
1-2 units (if available in inventory, FIFO rule applies), if another order comes in same day ahead of the dealer order then they may not be able to ship. If dealer sees it available then time is critical.
If only 1 available they will ship 1 and place one on normal factory lead time FIFO schedule.
If greater 3 or more of same PN bucket it will be treated as a stocking order, normal lead times FIFO in factory apply, exception is if inventory can be immediately backfilled < 1 week.
