Wash Systems

Est. 1974

What makes Whiting Systems Unique and Gives us a Competitive Advantage

- All stainless steel washdown motor
- SmartBrush technology
- 8" drive wheels vs. 3" that competitors use
- Direct Drive – Mechanical Drive Systems
- No electric brakes, all PLC and VFD ramp up – ramp down
- Touchscreen self diagnostics (2nd to none)
- Off Site Diagnostics with Complete Service Program
- Customized Programs – BEST in the World (have done as many as 36 on one unit)
- All 304 Stainless Steel frames
- Ability to build our frames to accommodate large vehicles and equipment
- All stainless steel air cylinders
- Precise chemical metering pumps with wash water pump – all on VFD for metering to the ounce. Not like a lot of our competitors that use hydrominder with a \$5 metering tip that is very inconsistent and doesn't last.
- All air valves...no electric or hydraulic valves like a lot of our competitors
- All of our mechanical devices, undercarriage, motors, pulleys, belts, couplers, etc. are designed to operate in the 65%-75% load range. This is very expensive to do but it increases the life of the equipment substantially. Our competitors typically operate in the 100% - 125% range... which is cheaper, but it will not last.
- We are a 41 year old second generation company.

We provide you with a complete Whiting Systems Program:

- Propose a detailed equipment list that is tailor made for your particular wash needs
- Provide spec sheets, cut sheets and a Complete Wash Cost Breakdown for all of the proposed equipment.
- Provide a complete set of CAD drawings that outline all of the utility requirements
- Coordinate with the GC on-site to go over all requirements prior to equipment installation
- Unload, place and install all of the equipment by our professional installation technicians
- Perform extensive testing on the equipment prior to turning it over to customer
- Conduct on-site Start-Up training for all pertinent personnel on operation, maintenance and safety procedures for all equipment installed.
- Provide daily, weekly and monthly maintenance checklist for "key personnel" to assist in minimal down time and preventative maintenance
- Provide step-by-step "Wash Procedures"
- Assign an Account Manager at WSI who will be the "point" person" for all of your needs after the sale, performing site visits, providing reports that will outline soap deliveries, maintenance calls, parts orders, etc... and insuring all equipment and personnel are working in conjunction with each other for optimal performance and efficiency

*The bottom line is that you can count
on the very best **Wash Quality**,
in the very best **Wash Time**,
for the very best **Wash Cost**. Hands Down!!*
