Recommended options when ordering or obtaining a chassis

- 84" cab to axle for rescue trucks
- Lowest gearing the manufacturer offers- When changing to taller tires, the lower gears help maintain higher torque
- No factory rearview camera -We provide our own with full builds that also offers right hand blind spot view
- No added upfitter package- We do not utilize any upfitter switches for our full builds, so this could be a cost savings
- True Cab and Chassis only- Minimum of 450/4500
- No dual fuel tanks- This option takes up space outside of the frame rail that poses issues with storage box layout
