

C•CURE 9000 Visitor Management

Features That Make a Difference:

Standard

- Completely integrated into C•CURE 9000 for greater efficiency and security
- Register, badge and track visitors across multiple sites with reporting accountability
- Capture and store visitor information with appointment details for policy compliance
- Easily manage individual and group visits, including first time walk-ins
- Temporary credential management for access controlled visitors
- Flexible software check in/check out at front desk or automated at access control points
- Customize data templates for fast appointment setup and visitor processing
- Email calendar file invites to hosts and visitors with appointment details and policy attachments
- Notify hosts by email when visitors check-in and remind visitors of unreturned temporary credentials

Enhanced

- Visitors can easily look up an appointment and register using the self-service kiosk (for use with iOS iPad only) - one license included with Visitor Management Enhanced option and 100 self-service kiosk apps per application server supported
- Secure web portal for authorized hosts to preregister visitors and manage scheduled appointments

Completely Integrated Visitor Management

C•CURE 9000 Visitor Management enhances the professionalism and security of the visitor registration and check in process – natively within C•CURE 9000. This completely embedded solution digitally replaces paper-based visitor log books for a more efficient way of managing visitors entering and existing a building.

Register, Badge, and Track Visitors

The C•CURE 9000 Standard Visitor Management option allows authorized operators to create and manage scheduled visits and process visitors from point of reception through check out – natively within C•CURE 9000 from any administration client workstation using C•CURE Portal.

Additionally, any physical access control of visitors is seamless with built-in temporary credential management. Technology-based access control cards can be specifically reserved and recycled for issuance to visitors, without sacrificing the tracking accountability of card inventory or visitor traffic.

Authorized Hosting of Visitors

C•CURE 9000 makes it easy to designate employees who are authorized to host visits, providing greater accountability and security. Employees hosting visits will receive automatic email notifications when their visitors are checked in upon arrival.

C•CURE Portal - Web Portal Productivity

For organizations with high employee counts and visitor traffic, the C•CURE 9000 Enhanced Visitor Management option further enables hosts to create and manage their visitor appointments from any desktop browser or mobile device via a self-service web portal.

- Pre-register visitors
- Schedule individual and group visits
- Pre-authorize access control clearances
- Provide visit instructions and policy documents
- Email scheduled visits in ICS calendar file format

Visitor Check In/Out Process

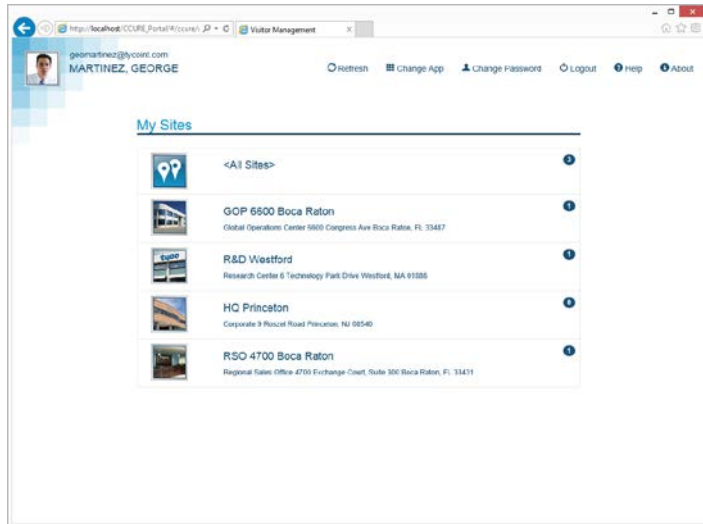

Visitors can be easily checked in and out directly from their appointment record within C•CURE 9000. Additionally, access controlled doors or turnstiles can be designated as automatic check in or check out points for visitors who are issued temporary credentials.

When visitors are checked out, C•CURE 9000 automatically deactivates all clearances associated with a temporary credential. This provides increased security should a temporary credential go unreturned or used without a visitor being checked in for a valid appointment.

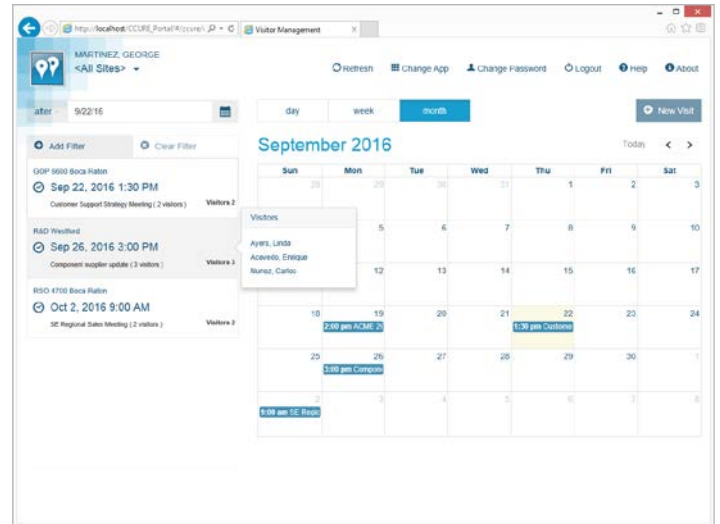

Self-Service Kiosk

Additionally, a self-service kiosk is available for visitors to look up an appointment and check in. Once a visitor enters his/her name or email address and host name into the app, an email is promptly sent to the host notifying him/her that the visitor has arrived. This allows companies to manage visitors when the receptionist is unavailable.

Quickly and Easily Set Up Visitor Appointments

Sites and Visit Templates allow you to pre-configure default data for easy management

Authorized hosts can manage their appointments by site with day, week, month calendar views
