Software House Multi-Technology Reader with Indala Support offers a unique, versatile single reader solution for reading both HID and Indala proximity cards simultaneously, while also reading multiple 13.56 MHz smart card technologies – including MIFARE® encrypted sectors – all with one reader. This powerful reader enables you to mix card populations of HID and Indala proximity cards without needing two separate readers, while also allowing a smooth, cost-effective transition to smart cards over time.

The reader continuously cycles between low and high frequency signals to read the presented card. Readers may be field-configured to enable or disable selected card formats and technologies.

The Multi-Technology Reader with Indala Support can be updated at any time with flash firmware. This saves significant time and money by allowing you to simply flash new card protocols or formats directly to the reader. The reader is configurable to read a specific encrypted MIFARE sector and block using standard or custom MIFARE read keys.

Important features such as a built-in tamper switch, two-piece connectors, and isolation spacers help reduce installation time. Coupled with robust environmental ratings and a lifetime warranty, the Software House Multi-Technology Reader with Indala Support is the clear choice for companies looking for a powerful, cost-effective way to use multiple card technologies.
