FEATURES

OVERVIEW

The Stripe Hog™ SK2000 is an auxiliary-driven waterblasting and recovery system designed for either asphalt or concrete roadways and airfields. The Stripe Hog SK2000 can prepare to vacate the runway in under 1 minute.

The SK2000 is equipped with ultra-high pressure needle sharp waterblasting jets creating up to 40,000 psi (2,750 bar) and up to 5.6 gpm (21.2 lpm). It uses ordinary fresh water without chemicals or detergents, along with a vacuum recovery system. Separating water from solids, it processes the reclaimed water for safe and easy disposal of the solid debris.

With a large water and debris tank capacity the SK2000 can stay on the job for several hours before dumping or replenishing with fresh water. An easy-to-use dump system and a remote-control panel in the cab make this truck a one-person operation... saving both time and money.

Our patented bladder tanks allow you to carry both fresh water and debris water in the same footprint allowing you to use the debris collection box for dewatered solid material only, radically increasing up time. The Stripe Hog™ SK2000 is built on an Isuzu FTR chassis; however, it can be mounted to the chassis of your choice. The SK2000 is also available as a trailer-mounted system.
